BAZI CHART

Complete Natal + 10-Year Luck Report (sample)

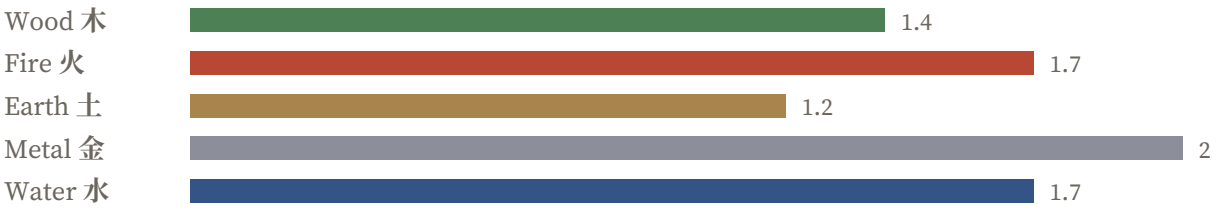

Everything in Essential, plus your luck pillars and a decision filter

Prepared 2026-10-01 · Order SAMPLE

Four Pillars · Xin (辛) Yin Metal Day Master

Year	Month	Day	Hour
Rob Wealth	*Hurting Officer*	*Day Master*	*Indirect Wealth*
庚	壬	辛	乙
Geng · Metal	Ren · Water	Xin · Metal	Yi · Wood
午	午	亥	未
Wu · Horse	Wu · Horse	Hai · Pig	Wei · Goat
Ding Ji	*Ding Ji*	*Ren Jia*	*Ji Ding Yi*

Five elements (weighted)

Contents

1. Your Chart at a Glance
2. How to Use This Report
3. Your Day Master
4. Season & Climate of Your Birth
5. The Five Elements in Your Chart
6. Ten Gods Snapshot
7. Career & Resources
8. Love & Collaboration
9. Energy Rhythm
10. Your Current Luck Pillar
11. Your Luck Pillars, Decade by Decade
12. Your Decision Filter
13. 7-Day Integration
14. Methodology & Limits

CHAPTER 1

Your Chart at a Glance

Chart evidence

- Year pillar: Geng-Wu (庚午) — Yang Metal stem (Rob Wealth), Horse branch (Fire).
- Month pillar: Ren-Wu (壬午) — Yang Water stem (Hurting Officer), Horse branch (Fire).
- Day pillar: Xin-Hai (辛亥) — Yin Metal stem (Day Master), Pig branch (Water).
- Hour pillar: Yi-Wei (乙未) — Yin Wood stem (Indirect Wealth), Goat branch (Earth).
- Weighted elements: Wood 1.4 · Fire 1.7 · Earth 1.2 · Metal 2 · Water 1.7.
- Day Master strength: weak (38% support).

This report is written for one chart: a Yin Metal Day Master, Xin (辛), born in summer in the year of the Horse. Every pillar, element count and luck pillar in it was calculated by code from your birth data; the prose then explains those facts in the language of traditional BaZi.

Reflect

As you read, which descriptions feel familiar — and which feel like someone else? Both are useful information.

CHAPTER 2

How to Use This Report

Chart evidence

- Each chapter opens with Chart evidence: the exact facts it is based on.
- The Reading explains those facts in traditional terms.
- Each chapter ends with one question to reflect on.

Read this report the way you would read a thoughtful letter about yourself: slowly, with a pen. BaZi describes tendencies and traditional associations, not fixed outcomes, so treat every chapter as a set of hypotheses to test against your own experience. Start with the chapters that interest you most; the Chart evidence box at the top of each one shows exactly which facts it draws on, so you can always check where a statement comes from. Where something does not fit, note it — a reading is a conversation, not a verdict. The reflective question at the end of each chapter is the most important part: answering it in writing, even in a few lines, turns the report from information into insight.

Reflect

What would you most like this report to help you think about over the next month?

CHAPTER 3

Your Day Master

Chart evidence

- Day pillar: Xin-Hai (辛亥).
- Day Master: Xin (辛), Yin Metal.
- Strength: weak, 38% of weighted points support it.

Your Day Master is Xin (辛), Yin Metal. Xin is Yin Metal, the yin aspect of the metal element. It is often read as precise, discerning and sensitive to quality and detail.

In BaZi the Day Master is the reference point of the whole chart: every other stem and branch is read by how it relates to it. Metal is traditionally associated with clarity, standards and decisive cuts. As a Yin stem, Xin is often described as the more inward, adaptive expression of its element.

Your Day Master scores as weak: 38% of the chart's weighted points come from its own element and the element that produces it. A weak Day Master is usually read as sensitive to its surroundings and at its best with good support around it.

Reflect

Where in your life do you most recognise the image of Yin Metal — and where would you like to express it more?

CHAPTER 4

Season & Climate of Your Birth

Chart evidence

- Month pillar: Ren-Wu (壬午).
- Month branch: Wu (午), Fire — Summer.
- Season supports the Day Master: no.

You were born in summer: your month branch is Wu (午), a Fire branch. Summer is Fire's season in the classical cycle: peak warmth and outward energy.

Classical BaZi gives the month branch the most weight of any position, because the season sets the climate every other element lives in. For a Metal Day Master, this season does not support you directly — the climate asks your Day Master to work with conditions rather than draw on them.

Readers often translate this into an everyday question of climate: in what conditions does your energy flow, and in which do you have to push? The month pillar is also traditionally linked with career and the middle years of life, so the season of your birth is a useful lens for how you approach work.

Reflect

In which "climate" — kinds of places, people or pace — do you feel your Metal nature works with the season rather than against it?

CHAPTER 5

The Five Elements in Your Chart

Chart evidence

- Weighted elements: Wood 1.4 · Fire 1.7 · Earth 1.2 · Metal 2 · Water 1.7.
- Most prominent: Metal.
- Every element appears at least once.

Weighted across stems and hidden stems, your chart counts Wood 1.4, Fire 1.7, Earth 1.2, Metal 2, Water 1.7. Metal is the most prominent element, and every element appears at least once.

Metal is traditionally associated with clarity, standards and decisive cuts. A prominent element often shows up as a familiar way of doing things — the move you make without thinking.

Readers look at this balance as a whole rather than at any one element: the counts describe which qualities come naturally and which you may meet less often.

Reflect

Which element in your chart do you lean on most — and what would it look like to borrow a little of Earth this week?

CHAPTER 6

Ten Gods Snapshot

Chart evidence

- Ten gods by prominence: Hurting Officer 1.5, Indirect Wealth 1, Rob Wealth 1, Seven Killings 1, Indirect Resource 0.5.
- year stem Geng: Rob Wealth.
- month stem Ren: Hurting Officer.
- hour stem Yi: Indirect Wealth.

The ten gods describe how each stem in the chart relates to your Day Master. They are the main vocabulary readers use to talk about roles and themes in a life.

Hurting Officer (weight 1.5) is traditionally linked with bold expression and questioning rules. **Indirect Wealth** (weight 1) is traditionally linked with opportunities and flexible resources. **Rob Wealth** (weight 1) is traditionally linked with competition, boldness and shared resources. **Seven Killings** (weight 1) is traditionally linked with pressure, drive and rising to challenges.

The most prominent ten gods point to the areas where your chart has the most to say. They describe tendencies, not outcomes: two people with the same ten gods can live them very differently, depending on choices and circumstances. Read them as a list of themes worth paying attention to rather than as labels.

Reflect

Which of these themes — Hurting Officer: bold expression and questioning rules; Indirect Wealth: opportunities and flexible resources; Rob Wealth: competition, boldness and shared resources — feels most alive in your life right now?

CHAPTER 7

Career & Resources

Chart evidence

- Officer stars (structure): 1.
- Wealth stars (resources): 1.
- Output stars (expression): 1.5.
- Resource stars (learning, support): 0.5.
- Peer stars: 1.

Career in BaZi is read mainly through the month pillar and through the balance of ten-god groups. In your chart the groups weigh in as follows: output 1.5, peers 1, wealth 1, officer 1, resource 0.5.

Output stars are traditionally read as a drive to express, create and show skill. Peer stars are traditionally read as independence and working alongside equals.

For a weak Metal Day Master, readers often suggest work settings that offer support, mentorship and a manageable pace. Resources follow the same logic: the usual reading pairs effort with the elements that balance the chart.

Reflect

Looking at your last two roles, when did you feel most effective — and which of these groups was most in use?

CHAPTER 8

Love & Collaboration

Chart evidence

- Day branch (palace of close relationships): Hai (亥), Pig, Water.
- Day branch element relative to the Day Master: the element the Day Master produces (expression and output).

In BaZi the day branch, sitting directly under your Day Master, is called the palace of close relationships. Yours is Hai (亥), the Pig, a Water branch. For your Metal Day Master, Water is the element the Day Master produces (expression and output).

Readers use this to describe what you tend to seek and offer in partnership. An output element here is often read as expressing care through doing, making and sharing. The same pattern often appears in close collaboration at work, not only in romance.

This is a description of tendencies. Relationships are made by two people and their choices; a chart can suggest what feels natural to you, and where you may need to communicate more deliberately.

Reflect

In your closest relationship or collaboration, what do you most often give — and what do you most need to receive?

CHAPTER 9

Energy Rhythm

Chart evidence

- Season of birth: Summer.
- Most prominent: Metal.
- Strength: weak.
- This chapter is about daily rhythm and reflection, not health guidance.

This chapter looks at rhythm and energy as a reflection exercise. It is not health guidance.

Classical texts link each element with a time of year and a quality of energy: Wood with spring and starting, Fire with summer and peak activity, Earth with the transitions between seasons, Metal with autumn and finishing, Water with winter and rest. Born in summer with Metal most prominent, your chart is often read as most at ease in the rhythm of clarity, standards and decisive cuts.

A weak Day Master suggests protecting recovery time and building energy before spending it. Try observing your week: when does focus come easily, and when does it take effort?

Reflect

If you planned tomorrow around your natural rhythm rather than your calendar, what would change first?

CHAPTER 10

Your Current Luck Pillar

Chart evidence

- Current luck pillar: Wu-Yin (戊寅), 2023–2032, from age 33: stem Earth (Direct Resource), branch Wood.
- Stem role: resource; branch role: wealth.
- Direction: backward.

Since 2023 (around age 33) you have been in the Wu-Yin (戊寅) luck pillar, which runs until about 2032. Its stem is Earth, the Direct Resource star for your Day Master — the element that produces the Day Master (support and learning); its branch is Wood, the element the Day Master controls (resources and effort).

The Direct Resource theme — support, learning and care — is traditionally the headline of these ten years, with the stem said to colour the first five years more and the branch the last five.

A luck pillar is a backdrop, not a script. Readers use it to ask which kinds of effort feel natural in this decade, and which take more deliberate work.

Reflect

Looking back to 2023, what has this decade asked of you — and what has it made easier?

CHAPTER 11

Your Luck Pillars, Decade by Decade

Chart evidence

- Xin-Si (辛巳), 1993–2002, from age 3: stem Metal (Friend), branch Fire.
- Geng-Chen (庚辰), 2003–2012, from age 13: stem Metal (Rob Wealth), branch Earth.
- Ji-Mao (己卯), 2013–2022, from age 23: stem Earth (Indirect Resource), branch Wood.
- Wu-Yin (戊寅), 2023–2032, from age 33: stem Earth (Direct Resource), branch Wood. (current)
- Ding-Chou (丁丑), 2033–2042, from age 43: stem Fire (Seven Killings), branch Earth.
- Bing-Zi (丙子), 2043–2052, from age 53: stem Fire (Direct Officer), branch Water.
- Yi-Hai (乙亥), 2053–2062, from age 63: stem Wood (Indirect Wealth), branch Water.
- Jia-Xu (甲戌), 2063–2072, from age 73: stem Wood (Direct Wealth), branch Earth.

Your luck pillars run backward from the month pillar, changing about every ten years. The coming years continue Wu-Yin (戊寅) until about 2032. Around 2033 (age 43) the Ding-Chou (丁丑) luck pillar begins: stem Fire (Seven Killings, pressure, drive and rising to challenges), branch Earth (the element that produces the Day Master (support and learning)). The years around a change of luck pillar are traditionally read as a transition: a good time to review commitments and decide what to carry into the next decade. The full sequence is listed in the Chart evidence above. Treat it as a map of seasons rather than a forecast of events.

Reflect

What would you like to have in place by 2033, when the Ding-Chou decade begins?

CHAPTER 12

Your Decision Filter

Chart evidence

- Most prominent: Metal.
- Least present: Earth.
- Strength: weak.
- Top ten gods: Hurting Officer, Indirect Wealth and Rob Wealth.

A decision filter turns the chart into a few questions you can ask before a choice. It does not make the decision; it helps you notice whether an option fits the way your chart is built.

1. **Pace:** with a weak Day Master, does this option leave room for recovery, people and learning around you?
2. **Elements:** does it bring in Earth — qualities your chart has less of — or does it rely only on Metal?
3. **Themes:** which of your main ten-god themes (Hurting Officer: bold expression and questioning rules; Indirect Wealth: opportunities and flexible resources; Rob Wealth: competition, boldness and shared resources) does it use?
4. **Timing:** how does it sit with the current luck pillar described earlier?

Run a real decision through these four questions and note which one changes your view most.

Reflect

Which decision in front of you right now would benefit most from these four questions?

CHAPTER 13

7-Day Integration

Chart evidence

- Day Master: Metal. Most prominent: Metal.

Insight sticks when it turns into practice. Here is a simple seven-day plan built from your chart.

- **Day 1 — Day Master:** write three sentences about where you recognise Xin (Metal) in yourself.
- **Day 2 — Season:** notice when your energy flows today and when it drags.
- **Day 3 — Prominent element:** use Metal deliberately — clarity, standards and decisive cuts — on one task.
- **Day 4 — Least-present element:** borrow Earth — stability, care and holding things together — through one small habit.
- **Day 5 — Work:** review one work task through the Career chapter.
- **Day 6 — Relationships:** ask someone close what they rely on you for.
- **Day 7 — Review:** reread your answers to the reflective questions and choose one change to keep.

Reflect

Which one of these seven days do you most want to repeat next week?

CHAPTER 14

Methodology & Limits

Chart evidence

- Year boundary: Lichun. Month boundary: the twelve jie solar terms.
- Hour and day pillars from true solar time when a birthplace is given.
- Strength: heuristic support ratio with the month branch weighted ×2.

Your pillars were calculated by code: the year changes at Lichun (the start of spring), months change at the twelve jie solar terms, and when a birthplace was given the hour and day pillars use true solar time. Element weights count visible stems and hidden stems with published weights; Day Master strength is a heuristic support ratio with the month branch weighted double. Every number in this report comes from that calculation. No writing model was used for this report: every chapter is template text written in advance and filled in with the values calculated from the chart.

BaZi is a traditional framework for reflection. This report describes tendencies and classical associations; it does not predict events and is not professional, medical, legal or financial advice. Different schools use different conventions, so another reader may weigh some factors differently. Use what is helpful, question what is not, and trust your own judgement.

Reflect

What is one thing from this report you want to test against your own experience over the next month?
